Summary:

This software is capable to connect to the video sources (such as Webcam) and process the received images, and also if there were any discrepancies in received images in specific time periods, The software will offer various alerts. In this software 4 types of alerts are embedded which we mention them in the following order: 1. Video recording: This program can record video after motion occurrence or specified time. 2. Image capturing: This program can capture images after motion occurrence at specified time intervals. 3. Dialing: This program has the ability of dialing and you can give a list of phone numbers to the software, and the program after detecting any motion, will dial the phone numbers, and can playback a WAV file or text after Communication. But this feature depends on the modem of device. 4. Playing audio file: By using this feature, you can route an audio file with WAV format to the software, and the software once detect any motion will attempt to play the file. The file could be a message or alarm. 5. Running a program: By using this feature, you can route An executable file to the software, and the software once detect any motion will attempt to run the program. 6. Hiding the software: By using this feature, once detect any motion, you can turn off monitor or hide the software till the user does not recognize the program activation. Other features: You can see the received images from the video source remotely, by using client software and web based monitoring. Another feature of this software is that your commands can be sent via a phone to the software to do them. You can also rotate the camera as local and remote by using a device. Disclaimer: Rotator device is not providing when you purchase the software.
